Friday	3:30-4:30pm	D221	Shane Mahoney	Hunting and the Art of Human Existence	The first humans marched slowly out of Africa and encircled our world, driven by need and curiosity and fuelled by the death of wild others. Perfecting the weapons, we fashioned the stone, honed the bone and wood, and hunted our way into modernity. Against nearly impossible odds, we developed a pathway to existence that was to become the hallmark of our species and the most enduring portal to our natural selves. Human and animal became inseparable; life and death were but a circle. While the world has changed, this has not. The deepest parts of our humanity remain not the constructs of modernity, of Newtonian science, nor Judeo-Christian beliefs. These concepts were already fully formed when the spear was being thrust through the mammoth's ribs. Join me as I explore the origins and impacts of our first engagements with the wildlife, as well as the undeniable historic and modern relevancies of our hunting tradition.
